

Polaroid Selected for Five-Year Guam Contract!

Polaroid Commercial ID Systems has been re-awarded a contract to provide the Government of Guam with several systems requiring Photo Identification. Polaroid has been Guam's provider of Drivers License hardware and software for the last several years. The new contract is to provide custom services, hardware, software, and support for the next five years.

Polaroid will provide systems to several government entities on the Island of Guam. The following systems are included in the Polaroid/Guam project:

- Drivers License Systems – Polaroid will provide Guam with hardware and software that meets the new RealID regulations for the Department of Revenue and Taxation.
- Guam State ID – Polaroid will provide hardware and software to meet new standards for the Guam ID Application.
- Guam Employee ID – Polaroid will install hardware/software and train the Government of Guam to implement a state-wide ID for all government departments.
- Guam Police Department – Polaroid will provide hardware and software to provide the Police Department with Commission Cards and Firearms Identification/Permits.
- Guam Health Department – Polaroid will implement photo identification equipment/software and integrate to existing systems utilized by the health department for Food Service Workers.

Guam Drivers License and State ID

Polaroid has been selected as the Government of Guam's sole contractor to perform custom integration and systems development for the Guam Drivers License (DL) Program and to provide the Guam State ID Card.

Polaroid is upgrading all of Guam's (DL) hardware and software to meet the new U.S Government's ReadID standards. This includes capture and print workstations comprised of Polaroid P5000E secure laminating printers with customized Guam overlamine, customized Polaroid ID Card Maker software, fingerprint capture software/hardware, signature capture software/hardware, and custom integration to the current Guam (DL) database.

Polaroid is also integrating Guam's new applications to other networks and (DL) systems in other states and jurisdictions. As a subject matter expert and consultant – Polaroid is assisting Guam with the overall implementation of these systems that meet and exceed the required security measures for Drivers License and State ID programs.

Guam Employee ID

Polaroid's broad range of experience and products will provide Guam with its systems to produce Government Employee ID Cards. These systems will integrate with the Guam Government Employee database and produce identification cards for employees, visitors, and contractors. Polaroid will install and support P5000E printers, ID Card Maker software, and integration services.

Guam Police Department

Polaroid will also integrate a similar system within the Guam Police Department. A single system will be implemented at the main Police Station to produce both Officer Commission Cards and Firearms Permits for residents. The integrated Police Department's workstation will include photo, fingerprint, and signature capture capabilities, along with an Officer and Firearm Permit holder database.

Other Systems Provided

Polaroid will install and integrate a custom, web-based application for the State Government and State Police to view information in the various databases created. Information available to the web application includes various data, photos, signatures, and fingerprints. This solution will implement facial recognition software capabilities for Guam to evaluate databases to see if an image is already on file under another alias.
